

## VDC PRO VIRTUAL DATACENTER

# Your public cloud in Switzerland

VDC Pro enables the smart, secure and speedy operation of your applications and workloads in the cloud. Our intuitive user portal offers optimal support in the development and expansion of your virtual server environment, while allowing you to optimize your costs.

With the VDC Pro virtual data center, you can easily create, test and scale your applications. VDC Pro combines maximum availability with flexibility and cost efficiency: with our pay-as-you-go model, you only pay for the resources and services you actually use, making big investments in hardware and setup costs a thing of the past.

### Multi-cloud replication

Replicate your VMs in a second cloud location with an RTO (Recovery Time Objective) defined by you.

### Multi-tenancy

VDC Pro enables the logical separation and management of client infrastructures.

### Automation

All features in the user portal can also be addressed via REST API and thus integrated into your systems.

## Your benefits

- ✓ Rapid availability
- ✓ Pay as you go – only pay for the resources and services you use
- ✓ Infrastructure with no purchase
- ✓ High level of availability and reliability
- ✓ Configured and installed in a highly secure data center in Switzerland
- ✓ Real-time overview of costs in the portal
- ✓ Professional support desk with optional 24/7 service

## Other key facts

### User management

Create individual users with different access rights to organizations and infrastructures.

### Logs

All changes can be viewed and tracked in the user portal.

### Firewall service

Use the integrated firewall service or third-party solutions such as Sophos or Fortigate.

### Load balancer service

The user portal gives you the option of using integrated load balancing services and creating highly available clusters as well as implementing other load balancer solutions.

### Server management

Create Windows and Linux servers in a single click and add more server power in seconds.

### Usage overview

The dashboard gives you all the information about how your virtual resources are being used at a glance.

## Options

### Network

- Connections to other racks or to a cloud
- Load balancer
- Additional public IPv4 addresses
- Network uplink up to 1000 Mbit/s
- Local VLANs

### Security

- Backup
- Cyber security
- Managed firewall
- Extended logging and monitoring
- Multi-cloud replication

### Other services

- Microsoft licenses, e.g. RDS, Office, SQL
- 24/7 support
- Professional services
