

Press release

Green Datacenter is expanding its Lupfig campus with an additional data center

The Lupfig site is to be enlarged once again to become the Swiss data hub for international cloud providers and companies.

Lupfig, April 30th, 2019 – Having completed the purchase of additional land, Green Datacenter AG is developing its largest Swiss data center location and has begun the planning and design of its fourth data center on its Zurich West campus. The new data center will support an IT load of 16 megawatts on data center floor space covering 5,500 m². Completion is forecast for 2020.

Green Datacenter's vision is to make Lupfig the Swiss data hub for hyperscale businesses and companies. Thus, the Zurich West campus, which boasts an office building and three data centers, is to be expanded on the building plot directly opposite the present site, forming a secure campus configuration. This will enable companies as well as hyperscale businesses to benefit from extremely short paths for networking their IT infrastructures, which is seen as a key advantage for future hybrid IT architectures.

Franz Grüter, President of the Board of Directors of Green Datacenter, explains, "I am very pleased that we can already announce the development of a new 16 MW data center. This represents another significant investment in the Lupfig campus. And with additional land available, we can offer our customers further expansion in Lupfig in the near future."

About Green Datacenter AG

Green Datacenter AG is one of the leading providers of data center services in Switzerland. In Zurich and vicinity, the company operates four data centers at the present stage. Two new projects are well underway. By September 2019, the company will have finished the first high-density data center in Switzerland that meets the requirements of the international cloud providers. The planning of a new data center has already started and will expand the Lupfig campus with a further high-density data center.

As a full-service provider, Green Datacenter offers IT infrastructure networking, deployment services, hands and eyes support, office spaces and emergency workstations, in addition to the data center spaces and colocation services. Companies in Switzerland, Europe and throughout the world put their trust in the security and availability of the Green data centers. Green Datacenter AG belongs to InfraVia.
